

EQ2S2X-CVR

QSFP28 to SFP28 Adapter (QSA) Module

Features

- > Trouble-free installation and network bring-up
- Compliant to industry standards: SFF-8665
- Compliant to industry standards: SFF-8432
- > Precision process control for minimization of pair-to-pair skew
- > 1 independent duplex channels operating at 25Gbps, also support for 10Gbps, 5Gbps data rates
- All-metal housing for superior EMI performance
- > 100ohm differential impedance system
- ➢ Operating case temperature: -20 to 85℃
- Low insertion loss
- Low crosstalk
- Secure latching mechanism
- RoHS compliant
- Compatible with RoHS
- Single +3.3V power supply

Applications

- Low EMI radiation Switches, servers and routers
- > Telecommunication and wireless infrastructure
- > Test and measurement equipment
- Networked storage systems
- Data Center networks
- Storage area networks

Product Description

The QSFP28 to SFP28 Adapter (QSA) Module offers 25 Gigabit Ethernet connectivityfor Quad Small Form-Factor Pluggable (QSFP28)-only platforms. It allows smooth and cost- effective migration to 100 Gigabit Ethernet by providing an option to use lower-speed Enhanced Small Form-Factor Pluggable (SFP28) modules in empty QSFP28 ports or when the other end of the network is running at lower speeds. The QSA Module interoperates with all major optical modules and direct attached copper cable vendors. Its design assures minimum loss on the conversion path between the QSFP28 cage and the SFP28 receptacle. The high-speed data channel of the SFP28 receptacle is connected to lane 1 of the QSFP28 connector. The three remaining channels on the QSFP28 connector are not connected. With this adapter, customers have the flexibility to use any SFP28 module or cable to connect to a lower-speed port on the other end of the network. This flexibility allows a cost-effective transition to 100 Gigabit Ethernet by maximizing the use of high-density 100 Gigabit Ethernet QSFP28 platforms. This adapter supports all SFP28 optics and cable reaches. Compatible switch models and SFP28 modules.A list of SFP28 modules that can be plugged into the QSA module is provided in Table 1

TheQSFP28 to SFP28 Adapter is qualified for 10GbE SFP+ and 1GbE SFP transceivers meeting the Small Form Factor Pluggable (SFP) Transceiver Multi-source Agreement (MSA). The QSA module provides a solution for integrating systems using different vendors 'equipment, is vendor agnostic and provides a direct path to the SFP port unit's memory.

Table 1.

| Item | Product Name | Product Description |
|------|----------------------------|---|
| 1 | SFP28-SR | 25GBASE-SR SFP28 Module for Multimode Fiber |
| 2 | SFP28-LR | 25GBASE-LR SFP28 Module for Single-Mode Fiber |
| 3 | SFP28 Passive Copper Cable | SFP28 Copper Cables (1-m to 5-m lengths) |
| 4 | SFP28 Active Optical Cable | SFP28 AOC Optical Cables |

Recommended Operation Condition

| Parameter | Symbol | Min | Мах | Unit |
|--------------------------------------|--------|------|------|------|
| Operating Case Temperature | Торс | -20 | 85 | degC |
| Storage Temperature | Tst | -40 | 85 | degC |
| Relative Humidity (non-condensation) | RS | - | 85 | % |
| Supply Voltage | VCC3 | 3.15 | 3.45 | V |
| Power consumption | Pout | | 0.3 | W |
| Characteristic Impedance | lm | 90 | 110 | Ohm |
| Data Rate | | 1 | 25 | Gbps |

| 38 | | GND | Ground | 1 | |

Note:

1. GND is the symbol for signal and supply (power) common for QSFP modules. All are common within the QSFP module and all module voltages are referenced to this potential otherwise noted. Connect these directly to the host board signal common ground plane

2. cc Rx, Vcc1 and Vcc Tx are the receiver and transmitter power suppliers and shall be applied concurrently. Recommended host board power supply filtering is shown below. Vcc Rx, Vcc1 and Vcc Tx may be internally connected within the QSFP transceiver module in any combination. The connector pins are each rated for a maximum current of 500mA.

| 19 | CML-I | TD- | Transmitter Inverted Data Input | | |
| 20 | | VeeT | Module Transmitter Ground | 1 | |

Notes:

- 1. The module signal grounds, VeeR and VeeT, shall be isolated from the module case.
- 2. This is an open collector/drain output and shall be pulled up with 4.7-10k to Vcc_Host on the host board. Pull ups can be connected to multiple power supplies, however the host board design shall ensure that no module has voltage exceeding module VccT/R + 0.5 V.
- 3. This is an open collector/drain input and shall be pulled up with 4.7-10k to VccT in the module.
- 4. See 2-wire electrical specifications.
- 5. This shall be pulled up with 4.7-10k to Vcc_Host on the host board.
